Dermaplaning

This is for anyone who suffers from "light peach fuzz" which cannot be affected by laser treatment. Dermaplaning gives a deeper exfoliation to the skin as well as removing the hair. This treatment leaves your skin glowing and baby soft, and it also helps to lighten pigmentation as well as rough patches.

Micropeel

Removes a thin layer of skin freeing impacted debris from the pores by method of enzyme or dermaplaning, followed with a range of alpha hydroxyl acids (aha's). This helps lessen the appearance of fine lines, brown spots, and acne scars.

Micropeel Plus

A light chemical exfoliation by use of salicylic acid. Ideal for acne skin types and helps even out skin discoloration. Limited to no down time.

Microdermabrasion

This treatment improves deep wrinkles, skin texture and tone by removing the topmost layer of skin leaving it more supple and vibrant. It also stimulates the elastic tissue beneath the surface of the skin resulting in a healthier and firmer appearance. It's non-invasive, pain-free and requires no down time after treatment.
